NATIONAL UNIVERSITY OF SINGAPORE

CS1101S — PROGRAMMING METHODOLOGY

(AY2020/2021 SEMESTER 1)

READING ASSESSMENT 2

Time Allowed: 45 Minutes

INSTRUCTIONS

- 1. This assessment contains 20 multiple-choice Questions in 4 Sections.
- 2. Each question has one correct answer. **1 mark** is awarded for each correct answer and there is no penalty for a wrong answer.
- 3. The full score of this assessment is **20 marks**.
- 4. Answer all questions.
- 5. This is a **Closed-Book** assessment, but you are allowed one double-sided **A4 / foolscap / letter-sized sheet** of handwritten or printed **notes**.
- 6. You are allowed to use up to **4 sheets** of **blank A4 / foolscap / letter-sized** paper as **scratch paper**.
- 7. You are allowed access to these online reference pages:
 - Source §3 pre-declared constants and functions at https://source-academy.github.io/source/source_3/global.html
 - Specification of Source §3 at https://source-academy.github.io/source/source_3.pdf
- 8. Follow the instructions of your invigilator or the module coordinator to submit your answers.

Section A

(1) What is the result of evaluating the following Source program?

```
function ff(x) {
    x = x + 1;
    return x;
}
function gg(y) {
    yy = y + 1;
    return y;
}
let xx = 1;
let yy = 1;
const k = 1000 * ff(xx) + 100 * gg(yy);
k + 10 * xx + yy;
A. 2111
B. 2112
C. 2121
D. 2122
E. 2211
F. 2212
G. 2221
H. 2222
```

(2) What is the result (in *list notation*) of evaluating the following Source program?

```
const B = map(x => x, A);
set_head(head(B), 3);
set_head(tail(B), 5);
A;

A. list(list(2), list(4))
B. list(list(2), list(5))
C. list(list(3), list(4))
D. list(list(3), list(5))
E. list(list(3), 5)
F. list(3, list(5))
G. list(3, 5)
```

const A = list(list(2), list(4));

Section B

For all the questions in this section, consider the following Source program:

Program X:

```
function ff(A, v) {
    let low = 0;
    let high = array_length(A) - 1;

while (low <= high) {
        const mid = math_floor((low + high) / 2 );
        if (v === A[mid]) {
            break;
        } else if (v < A[mid]) {
            high = mid - 1;
        } else {
            low = mid + 1;
        }
    }
    return (low <= high);
}

const A = [1,2,3,4,5,6,7];
ff(A, 5);</pre>
```

- (3) How many bindings does the program environment frame contain?
 - **A.** 0
 - **B.** 1
 - **C.** 2
 - **D.** 4
 - **E.** 5
 - **F.** 6
 - **G.** 7
- (4) How many environment frames get created during the evaluation of Program X? (Do not count the global environment frame. We assume that the application of the primitive functions array_length and math_floor do not create any frame.)
 - **A.** 3
 - **B.** 4
 - **C.** 5
 - **D.** 6
 - **E.** 8
 - **F.** 9

(5)	Of the environment frames that get created during the evaluation of Program X, how many extend the program environment <i>directly</i> ? (Do not count the global environment frame. We assume that the application of the primitive functions array_length and math_floor do not create any frame.)			
	A.	1		
	В.	2		
	C.	3		
	D.	4		
	E.	5		
	F.	6		
(6)	Of	the environment frames that get created during the evaluation of Program X, how		
	many <i>directly</i> extend the environment whose innermost frame contains the bindings variables low and high? (Do not count the global environment frame. We assume the application of the primitive functions array_length and math_floor do n create any frame.)			
	A.	0		
	А. В.	1		
		2		
	D.			
	Ε.	4		
	F.	5		
	G.	6		
(7)	What are the final values of the variables low and high at the end of the evaluation of Program X?			
	•	-		
	A.	low: 2 and high: 6		
	В.	low: 3 and high: 6		
	C.	low: 3 and high: 5		
	D.	low: 4 and high: 5		
	E.	low: 4 and high: 4		
	F.	low: 5 and high: 4		

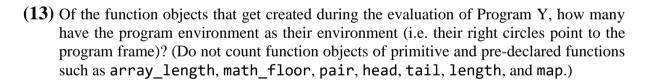

Section C

For all the questions in this section, consider the following Source program:

```
Program Y:
let y = 1;
function g(f) {
    y = y + 1;
    return x => 10 * f() + x;
}
const h = g(() => y + 1);
y = y + 1;
h(y);
```

- **(8)** What is the result of evaluating Program Y?
 - **A.** 12
 - **B.** 13
 - **C.** 22
 - **D.** 23
 - **E.** 32
 - **L.** 32
 - **F.** 33
 - **G.** 43
- (9) How many bindings does the program environment frame contain?
 - **A.** 0
 - **B.** 1
 - **C.** 2
 - **D.** 3
 - **E.** 4
 - **F.** 5
- (10) How many environment frames get created during the evaluation of Program Y? (Do not count the global environment frame.)
 - **A.** 1
 - **B.** 2
 - **C.** 3
 - **D.** 4
 - **E.** 5
 - **F.** 6

(11) Of the environment frames that get created during the evaluation of Program Y, how many extend the program environment <i>directly</i> ? (Do not count the global environment frame.)				
A. 1				
B. 2				
C. 3				
D. 4				
E. 5				
F. 6				
(12) How many function objects get created during the evaluation of Program Y? (Do not count function objects of primitive and pre-declared functions such as array_length, math_floor, pair, head, tail, length, and map.)				
A. 0				
B. 1				
C. 2				
D. 3				
E. 4				
F. 5				

- **A.** 0
- **B.** 1
- **C.** 2
- **D.** 3
- **E.** 4
- **F.** 5

Section D

For all the questions in this section, consider the following Source program:

Program Z:

```
let gg = x => (x % 2 === 0);
function fun(ff, xs) {
    gg = x => (x % 2 === 0);
    if (is_null(xs)) {
        return xs;
    } else if (gg(head(xs))) {
        const new_x = ff(head(xs));
        return pair(new_x, fun(ff, tail(xs)));
    } else {
        set_tail(xs, fun(ff, tail(xs)));
        return xs;
    }
}
const L = list(2, 3, 4);
const R = fun(x => 2 * x, L);
```

(14) What is the value of R (in *list notation*) at the end of the evaluation of Program Z?

```
A. list(2, 3)
```

- **B.** list(4, 3)
- C. list(2, 3, 4)
- **D.** list(4, 3, 4)
- E. list(2, 3, 8)
- **F.** list(4, 3, 8)

(15) What is the value of L (in *list notation*) at the end of the evaluation of Program Z?

- A. list(2, 3)
- B. list(4, 3)
- C. list(2, 3, 4)
- **D.** list(4, 3, 4)
- E. list(2, 3, 8)
- **F.** list(4, 3, 8)

(4.6)					
(16)	Hov	w many bindings does the program environment frame contain?			
	Α.	3			
	В.				
	C.				
	D.				
	E.	7			
	F.	8			
(17)		w many environment frames get created during the evaluation of Program Z? (Do not			
		nt the global environment frame. We assume that the application of the primitive ctions is_null, head, tail, pair, list, and set_tail do not create any frame.)			
	1 0,111				
	A.	5			
	B.	7			
	C.	8			
	D.	9			
	E.	10			
	F.	12			
	G.	14			
(10)	O.C.				
(18)	(18) Of the environment frames that get created during the evaluation of Program Z, how				
		by extend the program environment <i>directly</i> ? (Do not count the global environment ne. We assume that the application of the primitive functions is_null, head, tail,			
		r, list, and set_tail do not create any frame.)			
		1			
		1			
	B.	3			
	C.	4			
	D.	6 8			
	E.	9			
	F.				
	G.	10			

· · ·		nt function objects of primitive and pre-declared functions such as math_floor, .r, head, tail, length, and map.)
	A.	2
	B.	
	C.	4
	D .	6
	E.	7
	F.	9
		10
(20)	Of	the function objects that get created during the evaluation of Program Z, how many
	hav prog	e the program environment as their environment (i.e. their right circles point to the gram frame)? (Do not count function objects of primitive and pre-declared functions has math_floor, pair, head, tail, length, and map.)
	A.	1
	B.	2
	C.	
	D.	6
	Ε.	7
	F.	8
	G.	9
